**Class**
A4

**FUND DESCRIPTION**

The 27four Shariah Balanced Prescient Fund of Funds is a moderate risk multi-managed, multi-asset class portfolio providing asset class and fund manager diversification by investing in a combination of Shariah compliant equity funds, Islamic income and commodity products both locally and internationally. Suitable for investors with a medium-term investment horizon. The primary objectives are moderate capital growth and income generation.

**PERFORMANCE SUMMARY**

- **Asset Allocation**
  - SA Equity: 42.73%
  - SA Income: 10.86%
  - SA Murabahah Contracts: 17.85%
  - SA Cash: 1.52%
  - Offshore Equity: 22.43%
  - Offshore Sukuk: 4.22%
  - Offshore Cash: 0.38%

- **Performance Analysis**
  - 1 Month: 5.36% vs 6.11%
  - 3 Months: 1.27% vs 1.49%
  - 6 Months: 7.48% vs 7.89%
  - YTD: 3.02% vs 2.75%
  - 1 Year: 3.84% vs 3.92%
  - 3 Years (annualised): -
  - 5 Years (annualised): -
  - Inception (annualised): 4.16% vs 3.46%
  - Inception (cumulative): 10.35% vs 8.58%
  - Highest Rolling 1 Year Return: 8.29% vs 9.50%
  - Lowest Rolling 1 Year Return: -6.93% vs -10.46%

* Portfolio performance is calculated on a NAV to NAV basis and does not take any initial fee into account. Income is reinvested on actual payment date. Returns are taken on an Annualised Growth Rate. Source: Morningstar

**RISK PROFILE**

These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios. In turn the expected volatility is higher than the low risk portfolios but less than high risk portfolios. The probability of losses are higher than that of the low risk portfolios, but less than high risk portfolios. Expected potential long-term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

**INCOME DISTRIBUTION**

1st working day after declaration
- 2020/03/31: 4.93 cents per unit
- 2019/03/31: 2.19 cents per unit

**DISCLAIMER**

This portfolio operates as a white label under the Prescient Management Company (RF) Pty Ltd, which is governed by the Collective Investment Schemes Control Act.

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS’s are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate.

CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor’s fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund’s Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER is a guide to future performance. CIS’s are traded at the ruling price and can go into isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

GLOSSARY

Annualised Performance: Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Best Month: Largest increase in any single month.

Highest & Lowest Return: The highest and lowest returns over any 1 year period since the inception date.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Tracking Error: The volatility of the difference in returns between a Fund and its Benchmark. Also known as active risk.

% Positive Months: The percentage of months since inception where the Fund has delivered positive return.

FUND SPECIFIC RISKS

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

Foreign investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may fluctuate more than portfolios that are more broadly invested.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.
