

Mazi Asset Management Prime Equity Fund B2

31 May 2022

Fund Objective

The Mazi Asset Management Prime Equity Fund is a general equity Fund that seeks to sustain high long-term capital growth.

Risk Profile*

Low	Low - Medium	Medium	Medium - High	High
-----	--------------	--------	---------------	------

Portfolios in this category are tilted towards a higher equity exposure (both local and international) which could be tantamount to greater fluctuations (volatility) in short-term performances. While statistical analyses of markets' returns indicate that investments in equities (company shares) offer the highest expected returns in the longer-term, it also comes with the highest risk of short-term capital losses. Most investment returns from these portfolios are of a capital (rather than income) nature.

General Fund Information

Classification	South African EQ General
Benchmark	FTSE/JSE Capped SWIX All Share TR
Fund Inception Date	2010/08/05
Domicile	South Africa
Base Currency	Rand
Fund Size	R 872 654 190

Fund Universe

The fund can invest in listed and unlisted equity securities, preference shares, property securities, financial instruments and assets in liquid form. The portfolio's equity exposure will at all times exceed 80%.

Investment Strategy

The Fund may invest in financial instruments to achieve its objectives at the managers' discretion. The manager may include unlisted forward currency, interest rate and exchange rate swap transactions for efficient portfolio management. The Fund's equity exposure shall always exceed 80% with the balance, if any, invested in liquid assets. Nothing shall preclude the manager from varying the ratios of securities or assets in liquid form in changing economic environment or market conditions to meet the requirements of legislation or from retaining cash or placing cash on call deposits. The manager shall reserve the right to close the portfolio to new investors.

Who should be investing

The Fund is suitable for investors who:

- Seek specialist South African equity exposure as part of their overall investment strategy;
- Believe long term equity exposure adds value;
- Understand the nature of equity exposure in that there is a risk of market fluctuations.

Fee Structure

Total Expense Ratio (TER)	0,89%
Transaction Costs (TC)	0,26%
Investment Management Fee	0,86%
Initial Fee	N/A
Total Investment Charges (TIC)	1,15%

Glossary of Terms

Standard Deviation is a statistical measure of the dispersion of returns for a given security or market index.

Sortino Ratio measures the risk-adjusted return of an investment asset, portfolio, or strategy. It is a modification of the Sharpe ratio but penalizes only those returns falling below a user-specified target or required rate of return, while the Sharpe ratio penalizes both upside and downside volatility equally.

Sharpe Ratio is a measure for calculating risk-adjusted return. It is the average return earned in excess of the risk-free rate per unit of total risk.

Max Drawdown is the maximum loss from a peak to a trough of a portfolio, before a new peak is attained. Max drawdown is an indicator of downside risk over a specified time period.

Total Investment Charge (TIC) is the sum of the Total Expense Ratio (TER) and the Transaction Costs (TC).

Total Expense Ratio (TER) is the global standard used to measure the impact that the deduction of management and operating costs has on a fund's value. It gives you an indication of the effects these costs have on the future growth of your investment portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Also, the current TER may not necessarily be an accurate indication of future TERs.

Transaction Costs (TC) is a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER. Calculations are based on actual data where possible and best estimates where actual data is not available.

Market Commentary

The Ukraine/Russia conflict and resulting impact dominated the period, with global energy and commodity markets witnessing the most notable changes. The impact on some soft commodities was already filtering through into some of the most vulnerable countries, an example being Egypt that has sought financial assistance from the International Monetary Fund to mitigate the economic impact of the conflict. Almost forgotten was the US Fed's decision to commence the raising of interest rates in response to inflation fears as well as the normalisation objectives. Domestically, key data pointed to a continuation of the difficult economic conditions and outlook (unemployment, inflation etc.), whilst the budget highlighted the benefit derived from the positive performance of the commodity sector over the last twelve to eighteen months. Consequently, markets experience significant levels of volatility especially as the conflict commenced. The benchmark returned 6.7% over the quarter, with the portfolio delivering 7.5%.

Disclaimer

"The co-named funds (as defined in BN 778 of 2011) are registered under the Prime Collective Investment Scheme, managed by Prime Collective Investment Schemes Management Company (RF) (Pty) Ltd ("the manager") (Registration No. 2005/017098/07), a registered Collective Investment Schemes Management Company in terms of the Collective Investment Schemes Control Act 45 of 2002, supervised by the Financial Sector Conduct Authority ('FSCA'). The manager takes full responsibility for the co-named portfolio, regardless of any co-naming arrangements. Mazi Asset Management (Pty) Ltd (FSP No: 46405) is the FSCA approved and appointed investment manager of the co-named CIS funds situated on the North Wing, 4th Floor, 90 Rivonia Road, Sandton and is authorised as a Financial Services Provider. Collective Investment Schemes ("CIS") in securities are generally medium to long term investments. The value of participatory interests or the investment may go down as well as up and past performance is not necessarily a guide to future performance. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. All CIS are traded at ruling prices and can engage in borrowing and scrip lending. The manager reserves the right to close and reopen the portfolio to new investors from time to time in order to manage them more efficiently and in accordance with its mandate. A schedule of fees and charges and maximum commissions is available on request from the manager. Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Investment performance is calculated for the portfolio and is for illustrative purposes only. The investment performance may differ for each investor as it is calculated by taking into account the initial fees, the actual investment date, the date of reinvestment of income and dividend withholding tax and all ongoing fees. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Lump sum investment performances are quoted. Income distributions are in the calculations. Income is reinvested on the reinvestment date. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. Performance numbers and graphs are sourced from Morningstar. NAV to NAV figures have been used. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. Foreign securities may be included in the portfolio from time to time and as such may result in the following risks: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. A Money market portfolio is not a bank deposit account. The value of participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The total return to the investor is made up of interest received and any gain or loss made on any particular instrument. This will have the effect of increasing or decreasing the daily yield but in case of abnormal losses it can have the effect of reducing the capital value of the portfolio. The purpose of the money market yield is to indicate to investors a compounded annual return for all money market portfolios on a comparable basis. The yield calculation is not used for income distribution purposes. A forward-looking yield is used. This means that the last seven days' yield (less the service charges, including VAT) is taken and is annualised for the next 12-month period, assuming the income returns are reinvested. Yields for money market funds are published daily. The daily cut off time is 14:00 for trades and the valuation point is 17:00. Prices are published on Finswitch by 10:00 daily and are also available on request from the manager. This is a Minimum Disclosure Document and a general investor report and should not be seen as an offer to purchase any specific product and is not to be construed as advice or guidance in any form whatsoever. Investors are encouraged to obtain independent professional investment and taxation advice. Investors can also obtain additional information on the managers' website and all price related queries or information is readily available on request"
