**ASSET ALLOCATION RANGE**

### RISK RATING

![Risk Rating Diagram]

- Low
- Medium
- High

### Risk reward profile

Equity and property investments are volatile by nature and subject to potential capital loss. For credit and income instruments, while unlikely, capital loss may also occur due to an event like the default of an issuer. The portfolio may be subject to currency fluctuations due to its international exposure.

### GENERAL INFORMATION

**ASISA category**

South African Multi Asset Medium Equity

**Benchmark**

Inflation + 5% over rolling 3 years

**PORTFOLIO PROFILE**

The portfolio is suitable for investors requiring moderate levels of capital growth who do not wish to make complex asset allocation decisions between equities, cash and bonds, both locally and offshore. Diversification across asset classes and a maximum equity exposure of 60% helps to reduce risk and volatility relative to an average prudential portfolio. The portfolio complies with Regulation 28 of the South African Pension Funds Act.

---

1) The annualized total return is the average return earned by an investment each year over a given time period. Performance is calculated for the portfolio and individual investment performance may differ as a result of initial fees, the actual investment, the actual investment date, the date of reinvestment and dividend withholding tax. Due to the delayed release of inflation data, relevant benchmarks will lag by one month.

2) Total Expense Ratio (TER), expressed as a percentage of the Fund, relates to expenses incurred in the administration of the Fund. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TERs. Transaction Costs (TC), expressed as a percentage of the Fund, relate to the costs incurred in buying and selling the underlying assets of the Fund. TC are a necessary cost in administering the fund and impact total returns. They should not be considered in isolation as returns may be impacted by other factors, over time including market returns, the type of fund, the investment decisions of the investment manager and the TER. The Total Investment Charges expressed as a percentage of the Fund, relate to all investment costs of the Fund. Both the TER and TC of the Fund are calculated on an annualised basis, beginning 01/07/2017 and ending 30/06/2020.
PORTFOLIO ATTRIBUTES

- A moderate risk, balanced fund aiming to protect against capital losses over rolling 24-month periods.
- The manager aims to minimise downside participation while capturing an acceptable level of upside.
- The manager invests beyond traditional asset classes to add value via a broad range of strategies.
- The fund will have a maximum exposure of 60% to equity and 25% to listed property.
- The fund may invest in offshore markets as per South African Reserve Bank regulations.

INVESTMENT MANAGEMENT

- Abax Investments is an independent, owner-operated investment firm founded in 2003.
- AMG, a global asset management company, owns 25%, with 75% owned by staff and charitable trusts.
- Abax Investments are purely focused on fund management and have gained experience through various market cycles.
- Abax Investments have managed the Nedgroup Investments Opportunity Fund since inception in June 2011.

INVESTMENT PHILOSOPHY

- Focus on quality and price paid to protect downside and capture as much of the upside as possible.
- Use fundamentally based valuation models to identify assets which have deviated from fair value.
- Seek to balance risk across the alpha sources and construct well-diversified portfolios.
- Marry top-down asset class allocation with bottom-up view of individual securities.
- Portfolios are structured to maximise expected returns for an acceptable level of downside risk.
