

Our Thinking

Wall Street folklore is full of tales about investors going to great lengths to get an “edge”. These range from Nathan Rothschild’s alleged use of carrier pigeons to learn about Napoleon’s defeat at Waterloo in 1815, to stories about New York hedge fund managers hiring couriers to fetch the *Financial Times* from JFK airport before it hit the newsstands. It can be hard to separate fact from fiction in these accounts, but there’s no question that it used to be a lot easier to gain an informational edge.

We’ve seen this in our own evolution as a firm. Back in the early 1990s, it was not uncommon for analysts to rely on pencils, paper and financial calculators. It was a painful process, and with increasingly powerful computers available, we saw easy opportunities for pain relief. So we created proprietary screening tools and quantitative valuation models that reflected the thought process of our founder, Allan Gray.

Over the years, maintaining an edge has become ever more challenging, and our techniques and tools have continued to evolve. Our latest effort is the formation of our Investment Insights team. The team’s eight members include data analysts, data scientists, and data engineers, and their role is to help our stockpickers address hard-to-answer questions in an investment thesis. To do this, the team leverages alternative datasets and advanced analytics, including machine learning techniques.

We do not, however, let the machines run wild to find every statistical relationship under the sun. Instead, our team works in response to specific questions from the analyst researching the company. Our analysts use their independent judgement to form hypotheses, and where relevant, our Investment Insights team can help to validate—or just as usefully, invalidate—them.

Our research on Comcast, a cable communications and broadband giant in the US, is a good example of how this works in practice.

In analysing the company, two questions lent themselves to in-depth primary research. First, can Comcast continue to attract new broadband customers? And second, are Comcast’s plans competitive in terms of speed and pricing? Both can be answered with traditional research methods—speaking to the company and its competitors, forecasting based on historical growth rates, etc.—but those approaches come with biases and other shortcomings. The Investment Insights team was well-placed to help with a more rigorous solution.

To answer the first question, they sourced, cleaned and analysed over 20 million rows of publicly available

data reported by internet service providers (ISPs) to the Federal Communications Commission (FCC). The data in hand, they studied the coverage and product offerings of Comcast and its competitors right down to the smallest geographical unit for which the United States Census Bureau publishes data. What we found is that in about 60% of the areas where Comcast offers broadband, the only competitors were slower DSL offerings. This gave us confidence that Comcast could take market share as consumers seek out faster internet speeds.

To answer the second question, we analysed ISPs’ plan speed and pricing data from another publicly available source and found that Comcast is competitively priced against peers given its superior high speed offering. Answers to both of these questions were instrumental in our analyst’s decision to recommend the stock.

Comcast is just one example of the team’s work. The team has also mapped drugstores in Japan, analysed grocery stores in Russia, monitored foot traffic in casinos, analysed patent data and filing activities, and measured wind speed in the US in the context of local land use and topography. While others in our industry might use alternative data and machine learning to forecast sales next month or earnings next quarter, we use these techniques to understand a business’ prospects and the impact on its intrinsic value over *years*.

In addition to their work on individual companies, the Investment Insights team also develops capabilities that our analysts can use for a wider range of objectives. For instance, Natural Language Processing capabilities can be applied to a variety of unstructured texts to generate insights, and we’ve used this technique to analyse everything from SEC filings to online employee and consumer reviews.

Not all investments require this type of expertise to help our analysts to build conviction in a thesis. But the Investment Insights team provides powerful tools for our analysts to use when they *do* need them, and when it matters, it can make all the difference. Their input can help us build the conviction needed to suppress emotion and lean into a contrarian opportunity.

Over time, we expect that technology and the team will continue to evolve. So will our competitors. What won’t change is our focus on understanding the intrinsic value of companies and, in doing so, making the most of both human insights and the latest quantitative tools to develop an edge.

This report does not constitute a recommendation to buy, sell or hold any interests, shares or other securities in the companies mentioned in it nor does it constitute financial advice.

Orbis SICAV Global Balanced Fund

Shared Investor Refundable Reserve Fee Share Class (A) ("Shared Investor RRF Class (A)")

The Fund seeks to balance investment returns and risk of loss with a diversified global portfolio of equity, fixed income and commodity-linked instruments. It aims to earn higher long-term returns than its benchmark ("Benchmark"), which is comprised of 60% MSCI World Index with net dividends reinvested and 40% JP Morgan Global Government Bond Index ("60/40 Index"), each in US dollars.

For an initial period of time,* the Shared Investor RRF Class (A) is charging the fee of the Investor Share Class, reduced by 0.3% per annum.† Numerous investors have switched to the Shared Investor RRF Class (A) from the Investor Share Class. This temporary measure will ensure that the fees paid by investors account for underperformance experienced by the Investor Share Class before the inception date of the Shared Investor RRF Class (A).

Growth of US\$10,000 investment, net of fees, dividends reinvested

Information for the period before the inception of the Shared Investor RRF Class (A) on 14 May 2020 (date indicated by dashed line above) relates to the Investor Share Class.

Class Inception date (Shared Investor RRF Class (A))	14 May 2020
Number of shares (Shared Investor RRF Class (A))	15,496,319
Income distributions during the last 12 months	None

Fund Objective and Benchmark

The Fund seeks to balance investment returns and risk of loss with a diversified global portfolio of equities, fixed income instruments and commodity-linked instruments. It aims for higher long-term returns than its designated combined equity and bond performance benchmark, which is comprised of 60% MSCI World Index with net dividends reinvested and 40% JP Morgan Global Government Bond Index, each expressed in US\$ (the “60/40 Index” or “benchmark”).

How We Aim to Achieve the Fund’s Objective/Adherence to Objective

The Fund is actively managed and invests in equities, fixed income instruments and commodity-linked instruments. Fund weightings among the different asset classes are determined based on their appreciation, income and risk of loss potential, with appropriate diversification.

Equities. The Investment Manager targets the Fund to hold 40-90% of its net asset value in a pool of global equities, including some which may provide exposure to real estate. The Fund invests in shares considered to offer fundamental value and dividend paying potential that is superior to its benchmark. The lower the price of a share as compared to its assessed intrinsic value, the more attractive Orbis considers the equity’s fundamental value. The Investment Manager believes the main risk of investing in equities is that their prices will decline if relevant stockmarkets fall significantly. To reduce this risk, when Orbis’ research suggests that stockmarkets are overvalued and vulnerable, the Investment Manager may reduce exposure to, or hedge, stockmarket risk. When Orbis’ research suggests that stockmarkets represent good value, the Investment Manager may increase exposure to stockmarket risk by decreasing the amount of that hedging. The Investment Manager intends to limit the Fund’s exposure to stockmarkets net of hedging to 75% of its net asset value. Furthermore, the Fund may buy and sell exchange-traded equity call and put options for investment efficiency purposes, but only to the extent the Fund is capable of meeting its payment or delivery obligations related to such options, for example, by holding the underlying security.

Fixed Income Instruments. The Investment Manager targets the Fund to hold 10-50% of its net asset value in fixed income instruments issued by corporate bodies, governments and other entities. These are selected – like equities – with the aim of increasing the Fund’s overall risk-adjusted return. Characteristics such as yield, liquidity and potential diversification benefits are viewed in the context of the risk and reward of the portfolio as a whole. When Orbis’ research suggests that bond markets are overvalued and vulnerable, the Investment Manager may reduce exposure to, or hedge, bond market risk. When Orbis’ research suggests that bond markets represent stronger value, the Investment Manager may increase exposure to bond market risk by decreasing the amount of that hedging. The Investment Manager intends to limit aggregate hedging of the Fund’s stockmarket and bond market exposure to no more than 30% of its net asset value. Importantly, the Investment Manager may cause the Fund to be over this hedging target, at times meaningfully so and/or for extended periods of time where it considers this to be in the best interest of the Fund. The Fund’s fixed income selections in aggregate may differ significantly from the benchmark in duration and credit quality and may include securities of issuers that are under bankruptcy or similar judicial reorganisation, notably distressed debt. In addition, the Fund may invest in money market instruments, cash, cash equivalents and high yield bonds.

Commodity-linked Instruments. The Investment Manager targets the Fund to hold 0-10% of its net asset value in commodity-linked instruments, which may provide the Fund with indirect exposure to commodities. The Fund will gain exposure to commodities if the Investment Manager’s investment research process identifies a commodity or class of commodities as being more attractive than overall equity and fixed income opportunities, taking into account any risk reduction benefits of diversification.

Exchange rate fluctuations significantly influence global investment returns. For this reason, part of Orbis’ research effort is devoted to forecasting currency trends. Taking into account these expected trends, the Investment Manager actively reviews the Fund’s currency exposure. In doing so, it places particular focus on managing the Fund’s exposure to those currencies less likely to hold their long-term value.

The Investment Manager may cause the Fund to be under or over the asset allocation and hedging targets and limits described above where it considers this to be in the best interest of the Fund. The Fund’s holdings may deviate meaningfully from the 60/40 Index.

The net returns of the Shared Investor RRF Class (A) from its inception on 14 May 2020, stitched with the net returns of the Investor Share Class from the Fund’s inception to 14 May 2020, have underperformed the Performance Fee Benchmark of the classes. The Fund will experience periods of underperformance in pursuit of its long-term objective.

Management Fee

As is described in more detail in the Fund’s Prospectus, the Fund’s various share classes bear different management fees. The fees are designed to align the Manager’s and Investment Manager’s interests with those of investors in the Fund.

For an initial period of time, the Shared Investor RRF Class (A) is charging the fee of the Investor Share Class, reduced by 0.3% per annum. Numerous investors have switched to the Shared Investor RRF Class (A) from the Investor Share Class. This temporary measure will ensure that the fees paid by investors account for underperformance experienced by the Investor Share Class before the inception date of the Shared Investor RRF Class (A). The fee of the Investor Share Class that is currently being charged to the Shared Investor RRF Class (A) is calculated as follows:

The fee rate is calculated weekly by comparing the Class’ performance over three years against the 60/40 Index. For each percentage point of three year performance above or below that benchmark’s performance, 0.04 percentage points are added to or subtracted from 1.5%, subject to the following limits:

- Maximum fee: 2.5% per annum
- Minimum fee: 0.5% per annum

This fee is then reduced by 0.3% per annum. This 0.3% per annum reduction is provided because investors in the Shared Investor RRF Class (A) are subject to an additional administrative fee, as they separately agree with Allan Gray Proprietary Limited (or one of its affiliates) from time to time.

The Shared Investor RRF Class (A) will continue to charge the fee of the Investor Share Class, reduced by 0.3% per annum, until the earlier of the first dealing day (a) on or after 14 May 2023, or (b) on which the average management fee charged by the Investor Share Class equals or exceeds 1.5% per annum of the Investor Share Class’ net assets for the period ending on that dealing day and beginning on the later of (i) 12 months prior to that dealing day, or (ii) 14 May 2020. After this point, the Class’ management fee will instead be charged as follows:

- **Base Fee:** Calculated and accrued weekly at a rate of 0.8% per annum of the Class’ net asset value. Investors separately pay an administrative fee directly to Allan Gray Proprietary Limited or one of its affiliates. The Investment Manager or one of its affiliates is entitled to receive a separate fee from Allan Gray Proprietary Limited or one of its affiliates in connection with this administrative fee, related to services the Investment Manager and its affiliates provide to Allan Gray Proprietary Limited or its affiliates.
- **Refundable Performance Fee:** When the performance of the Shared Investor RRF Class (A) (after deducting the Base Fee and an additional 0.3% per annum, which is deemed to be representative of the aforementioned administrative fee) beats the Performance Fee Benchmark over the period from one dealing day to the next, 25% of the value of the outperformance is paid into a reserve and reinvested into the Fund. If the value of the reserve is positive on any dealing day, the Investment Manager is entitled to a performance fee in an amount capped at the lesser of an annualised rate of (a) one-third of the reserve’s net asset value and (b) 2.5% of the net asset value of the Shared Investor RRF Class (A). Fees paid from the reserve to the Investment Manager are not available to be refunded as described below.

When the performance of the Shared Investor RRF Class (A) (after deducting the Base Fee and the aforementioned additional 0.3% per annum) trails the Performance Fee Benchmark over the period from one dealing day to the next, 25% of the value of the underperformance is refunded from the reserve to the Shared Investor RRF Class (A). If at any time sufficient value does not exist in the reserve to provide the refund, a reserve recovery mark is set, and subsequent underperformance is tracked. Such relative losses must be recovered before any outperformance results in any payment to the reserve.

Please review the Fund’s prospectus for additional detail and for a description of the management fee borne by the Fund’s other share classes.

Orbis SICAV Global Balanced Fund

Shared Investor Refundable Reserve Fee Share Class (A) (“Shared Investor RRF Class (A)”)

Fees, Expenses and Total Expense Ratio (TER)

The relevant class within the Fund bears all expenses payable by such class, which shall include but not be limited to fees payable to its Manager, Investment Manager and additional services providers, fees and expenses involved in registering and maintaining governmental registrations, taxes, duties and all other operating expenses, including the cost of buying and selling assets. However, the Manager and the Investment Manager have agreed that in the current calendar year, except for specified exclusions, operating expenses attributable to the Fund's Shared Investor RRF Class (A) will be capped at 0.20%. Please refer to the Fund's Prospectus for a description of the fee cap applicable to its other share classes. Each cap will be automatically extended for further successive one year periods unless terminated by the Manager or the Investment Manager at least three months prior to the end of the then current term. The operating expenses that are capped are all expenses, excluding the Manager's and Investment Managers' fees described above under “Management Fee,” the cost of buying and selling assets, interest and brokerage charges, and certain taxes.

Where an investor subscribes or redeems an amount representing 5% or more of the net asset value of the Fund, the Manager may cause the Fund to levy a fee of 0.40% of the net asset value of the Fund's shares being acquired or redeemed.

The annual management fees charged are included in the TER. The TER is a measure of the actual expenses incurred by the class over a 12 month period, excluding trading costs. Since Fund and Class returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns. Expenses may vary, so the current TER is not a reliable indicator of future TERs.

Risk/Reward Profile

- The Investment Manager aims to contain the risk of monetary loss to a level that is below the risk of loss experienced by global equity funds but higher than that experienced by government bond funds and cash deposits over the long term. Investors should be aware that this expected reduction in risk of loss comes at the expense of long-term expected return.
- While the Investment Manager expects the Fund's investment approach to result in volatility below that of a typical global equity fund, the Fund's net asset value will fluctuate, and the Fund will experience periods of volatility and negative returns; investments in the Fund may suffer capital loss.
- Investors should understand that the Investment Manager generally assesses an investment's attractiveness over a three-to-five year time horizon.

- for the Shared Investor RRF Share Class(es), Standard Share Class(es), and Investor Share Class(es), from the Orbis website at www.orbis.com.

Legal Notices

Returns are net of fees, include income and assume reinvestment of dividends. Figures quoted are for the periods indicated for a \$10,000 investment (lump sum, for illustrative purposes only). Annualised returns show the average amount earned on an investment in the Fund/share class each year over the given time period. This Report does not constitute advice nor a recommendation to buy, sell or hold, nor an offer to sell or a solicitation to buy interests or shares in the Orbis Funds or other securities in the companies mentioned in it.

Collective Investment Schemes (CIS) are generally medium to long-term investments. The value of an investment in the Fund may go down as well as up, and past performance is not a reliable indicator of future results. Neither the Manager nor the Investment Manager provides any guarantee with respect to capital or the Fund's returns. CIS are traded at ruling prices and can engage in borrowing and scrip lending. Commission and incentives may be paid by investors to third parties and, if so, would be included in the overall costs. Individual investors' performance may differ as a result of investment date, reinvestment date and dividend withholding tax, as well as a levy that may apply in the case of transactions representing more than 5% of the Fund's net asset value. The Fund may be closed to new investments at any time in order to be managed in accordance with its mandate. The Fund invests in foreign securities. Depending on their markets, trading in those securities may carry risks relating to, among others, macroeconomic and political circumstances, constraints on liquidity or the repatriation of funds, foreign exchange rate fluctuations, taxation and trade settlement.

The discussion topics for the commentaries were selected, and the commentaries were finalised and approved, by Orbis Investment Management Limited, the Fund's Investment Manager. Information in this Report is based on sources believed to be accurate and reliable and provided "as is" and in good faith. The Orbis Group does not make any representation or warranty as to accuracy, reliability, timeliness or completeness of the information in this Report. The Orbis Group disclaims all liability (whether arising in contract, tort, negligence or otherwise) for any error, omission, loss or damage (whether direct, indirect, consequential or otherwise) in connection with the information in this Report.

Fund Information

The benchmark is a composite index consisting of the MSCI World Index with net dividends reinvested (60%) and the JP Morgan Global Government Bond Index (40%).

Net Equity is Gross Equity minus stockmarket hedging. Fixed Income refers to fixed income instruments issued by corporate bodies, governments and other entities, such as bonds, money market instruments and cash and cash equivalents. Fixed Income regional allocation is based on the currency denomination of the instrument. Net Fixed Income is Gross Fixed Income minus bond market hedging.

Fund Minimum

Minimum investment amounts in the Fund are specified in the Fund's Prospectus, provided that a new investor in the Orbis Funds must open an investment account with Orbis, which may be subject to minimum investment restrictions, country restrictions and/or other terms and conditions. For more information on opening an Orbis investment account, please visit www.orbis.com.

Clients investing via Allan Gray, which includes the Allan Gray Investment Platform, an Allan Gray investment pool or otherwise through Allan Gray Nominees, remain subject to the investment minimums specified by the applicable terms and conditions.

Sources

The 60/40 Index values are calculated by Orbis using end of day index level values licensed from MSCI ("MSCI Data"). For the avoidance of doubt, MSCI is not the benchmark "administrator" for, or a "contributor", "submitter" or "supervised contributor" to, the blended returns, and the MSCI Data is not considered a "contribution" or "submission" in relation to the blended returns, as those terms may be defined in any rules, laws, regulations, legislation or international standards. MSCI Data is provided "as is" without warranty or liability and no copying or distribution is permitted. MSCI does not make any representation regarding the advisability of any investment or strategy and does not sponsor, promote, issue, sell or otherwise recommend or endorse any investment or strategy, including any financial products or strategies based on, tracking or otherwise utilising any MSCI Data, models, analytics or other materials or information. JP Morgan Global Government Bond Index (the "GBI"): Information has been obtained from sources believed to be reliable but J.P. Morgan does not warrant its completeness or accuracy. The GBI is used with permission. Copyright 2021, J.P. Morgan Chase & Co. All rights reserved. The 60/40 Index may not be copied, used, or distributed without prior written approval.

Such information (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. The latest average fund indices provided by Morningstar are for 22 April 2021. To allow comparison of returns to a common date we have extended the average equity and multi-asset class fund indices to reflect the subsequent movement of the applicable benchmark indices. Average fund returns are not shown for periods of a month or less as high price volatility and late fund reporting regularly cause them to be significantly restated by Morningstar.

Notes to Help You Understand This Report

Certain capitalised terms are defined in the Glossary section of the Orbis Funds' respective Prospectuses, copies of which are available upon request from Allan Gray Unit Trust Management (RF) Proprietary Limited, a Member of the Association for Savings & Investments SA. The country and currency classification for securities follows that of third-party providers for comparability purposes. Emerging Markets follows MSCI classification when available and includes Frontier Markets. Emerging Markets currency exposure is based on currency denomination. Based on a number of factors including the location of the underlying business, Orbis may consider a security's classification to be different and manage the Funds' exposures accordingly. Totals presented in this Report may not sum due to rounding.

Risk measures are ex-post and calculated on a monthly return series. Months to recovery measures the number of months from the preceding peak in performance to recovery of that level of performance.

12 month portfolio turnover for the Orbis Equity and Multi-Asset Class Funds is calculated as the lesser of total security purchases or sales in the Fund over the period, divided by the average net asset value (NAV) of the Fund. Cash and cash equivalents are not included.

12 month name turnover for the Orbis Equity and Multi-Asset Class Funds is calculated as the number of positions held by the Fund at the start of the period but no longer held at the end of the period, divided by the total number of positions held by the Fund at the start of the period. Cash and cash equivalents are not included.

Active share is a measure of the extent to which the holdings of the Orbis Equity and Multi-Asset Class Funds differ from their respective benchmark's holdings. It is calculated by summing the absolute value of the differences of the weight of each individual security in the specific Orbis Fund, versus the weight of each holding in the respective benchmark index, and dividing by two. For the Multi-Asset Class Funds, three calculations of active share are disclosed. The Portfolio active share incorporates the equity, fixed income, commodity-linked and other securities (as applicable) held by the Orbis Fund and compares those to the holdings of the composite benchmark. The Equity and Fixed Income active shares are calculated as if the equity and fixed income portions of the Orbis Funds are independent funds; each of those two sets of holdings is separately compared to the fully-weighted holdings in the appropriate component of the composite benchmark. Although the Multi-Asset Class Funds hedge stock and bond market exposure, the active share calculations are "gross" and not adjusted to reflect the hedging in place at any point in time.

The total expense ratio has been calculated using the expenses, excluding trading costs, for the 12 month period ending 30 April 2021.
