**Our Thinking**

**How is the market up?**

After the worst five-week crash ever, global stockmarkets have recovered all of their losses in just five months, with the MSCI World Index setting a new all-time high in late August. As the world continues to struggle with the pandemic, how is the market up?

There are just three sources of equity returns: fundamental growth, changes in valuations, and dividends. By splitting out each one individually, we can see what is driving markets. For fundamental growth, we can look at changes in expected earnings, and for valuations, we can look at the change in the price-earnings multiple for the index. To “look through” the extraordinary conditions of 2020, we will focus on earnings estimates for 2021.

This gives us the breakdown below. Dividends have chipped in 1.2% towards returns. Earnings expectations have collapsed by 15.5%, but this has been more than offset by rising valuations, leaving the market’s price-earnings multiple 23.2% higher than at the start of the year. After the recovery, the market now trades at 19 times estimated next-year earnings. This is an unusually rich level, and one that has not been surpassed since the tech bubble burst in 2001.

That explains how markets are up. Despite falling earnings expectations, markets are up because valuations have become much more expensive. But why markets are up is a different question.

One explanation is that not all companies are suffering. To quote Microsoft’s CEO, “we have seen two years’ worth of digital transformation in two months.” Two years’ worth in two months might also be an apt description of recent stock returns for software firms.

The other explanation is that central banks have flooded the market with money, pushing down bond yields. If bonds offer lower returns, that makes equities look better in comparison, and should lead to higher stock prices. At the start of the year, 10-year US Treasury bonds yielded 1.9% and the MSCI World Index offered an earnings yield (earnings divided by price) of 6.4%, for a spread of 4.5% over bond yields. As we’ve seen, stocks are now more expensive, offering an earnings yield of just 5.2%. But Treasury yields have also fallen, to 0.7%. The difference (4.5%) is essentially unchanged since the start of the year, suggesting that lower bond yields deserve at least partial credit (or blame) for higher equity valuations.

But an explanation of what has happened is not a guide for what will happen. The unusual conditions of 2020 are unlikely to repeat, and today’s high starting valuations do not augur well for future long-term returns—at least, not for headline stock indices.

The good news is that those headline indices do a crude job of representing the opportunities available to bottom-up stockpickers. As the chart below shows, the biggest 50 companies in the US have repeatedly set new record highs, pulling up the return of the capitalisation-weighted MSCI World Index. But if we look at the average stock globally on an equal-weighted basis, we see that the average stock remains stuck in a bear market that started all the way back in early 2018. That excites us, because it suggests that there are plenty of companies out there where valuations may be much more attractive. Such opportunities represent the bulk of the Orbis Funds.

In fact, the Orbis Global Equity Strategy holds only six of the biggest 50 American companies, and while those giant firms represent 35% of world stockmarkets, they account for just 14% of the Strategy. The other 86% is in several dozen companies picked from the forgotten “rest”. In aggregate, our companies have similar or better fundamentals than the wider market, but trade at a steep discount. Being so different from the market isn’t always comfortable, but with market valuations where they are today, we wouldn’t have it any other way.

Orbis SICAV
Global Balanced Fund

Shared Investor Refundable Reserve Fee Share Class (A) ("Shared Investor RRF Class (A)"")

The Fund seeks to balance investment returns and risk of loss with a diversified global portfolio of equity, fixed income and commodity-linked instruments. It aims to earn higher long-term returns than its benchmark ("Benchmark"), which is comprised of 60% MSCI World Index with net dividends reinvested and 40% JP Morgan Global Government Bond Index ("60/40 Index"), each in US dollars.

For an initial period of time, the Shared Investor RRF Class (A) is charging the fee of the Investor Share Class, reduced by 0.3% per annum. Numerous investors have switched to the Shared Investor RRF Class (A) from the Investor Share Class. This temporary measure will ensure that the fees paid by investors account for underperformance experienced by the Investor Share Class before the inception date of the Shared Investor RRF Class (A).

Information for the period before the inception of the Shared Investor RRF Class (A) on 14 May 2020 (date indicated by dashed line above) relates to the Investor Share Class.

Notes:

1. The Shared Investor RRF Class (A) will continue to charge the fee of the Investor Share Class, reduced by 0.3% per annum, until the earlier of the first dealing day (a) on or after 14 May 2023, or (b) on which the average management fee charged by the Investor Share Class equals or exceeds 1.5% per annum of the Investor Share Class' net assets for the period commencing on that dealing day and beginning on the latter of (i) 12 months prior to that dealing day, or (ii) 14 May 2020. Please refer to the Fund's prospectus for more details.

2. Number of months since the start of the drawdown. This drawdown is not yet recovered.

3. Full management fee consists of 1.5% per annum ± up to 1%, based on 3 year rolling outperformance/underperformance vs Benchmark. Beginning 14 May 2020, for its application to the Shared Investor RRF Class (A), this fee is reduced by 0.3% per annum.

4. Regions other than Emerging Markets include only Developed countries.

Fund Objective and Benchmark

The Fund seeks to balance investment returns and risk of loss with a diversified global portfolio of equities, fixed income instruments and commodity-linked instruments. It aims for higher long-term returns than its designated combined equity and bond performance benchmark, which is comprised of 60% MSCI World Index with net dividends reinvested and 40% JP Morgan Global Government Bond Index, each expressed in US$ (the “60/40 Index” or “benchmark”).

How We Aim to Achieve the Fund’s Objective/Adherence to Objective

The Fund is actively managed and invests in equities, fixed income instruments and commodity-linked instruments. Asset allocations among the different asset classes are determined based on their appreciation, income and risk of loss potential, with appropriate diversification.

Equities: The Investment Manager targets the Fund to hold 40-90% of its net asset value in a pool of global equities, including some which may provide exposure to real assets. The Investment Manager invests in shares considered to offer fundamental value and dividend paying potential that is superior to its benchmark. The lower the price of a share as compared to its assessed intrinsic value, the more attractive it is to the Fund’s investment strategy. The Investment Manager believes the main risk of investing in equities is that their prices will decline if relevant stockmarkets fall significantly. To reduce this risk, when Orbis’ research suggests that stockmarkets are overvalued and vulnerable, the Investment Manager may reduce exposure to, or hedge, stockmarket risk. When Orbis’ research suggests that stockmarkets represent good value, the Investment Manager may increase exposure to stockmarket risk by increasing the amount of that hedging. The Investment Manager intends to limit the Fund’s exposure to stockmarkets net of hedging to 75% of its net asset value. Furthermore, the Fund may buy and sell exchange-traded equity call and put options for investment efficiency purposes, but only to the extent the Fund is capable of meeting its payment or delivery obligations related to such options, for example, by holding the underlying security.

Fixed Income Instruments: The Investment Manager targets the Fund to hold 10-50% of its net asset value in fixed income instruments issued by corporate bodies, governments and other entities. These are selected – like equities – with the aim of increasing the Fund’s overall risk-adjusted return. Characteristics such as yield, liquidity and potential diversification benefits are viewed in the context of the risk and returns of the portfolio as a whole. When Orbis’ research suggests that bond markets are overvalued and vulnerable, the Investment Manager may reduce exposure to, or hedge, bond market risk. When Orbis’ research suggests that bond markets represent strong value, the Investment Manager may increase exposure to bond market risk by decreasing the amount of that hedging. The Investment Manager intends to limit aggregate hedging of the Fund’s stockmarket and bond market exposure to no more than 30% of its net asset value. Importantly, the Investment Manager may cause the Fund to be over this hedging target, at times meaningfully so and/or for extended periods of time when it considers this to be in the best interest of the Fund. The Fund’s fixed income selections in aggregate may differ significantly from the benchmark in duration and credit quality and may include securities of issuers that are under bankruptcy or similar judicial reorganisation, notably distressed debt. In addition, the Fund may invest in money market instruments, cash, cash equivalents and high yield bonds.

Commodity-linked Instruments: The Investment Manager targets the Fund to hold 0-10% of its net asset value in commodity-linked instruments, which may provide exposure to commodities. The Investment Manager will gain exposure to commodities if the Investment Manager’s investment research process identifies a commodity or class of commodities as being more attractive than overall equity and fixed income opportunities, taking into account any risk reduction benefits of diversification.

Exchange rate fluctuations significantly influence global investment returns. For this reason, part of Orbis’ research effort is devoted to forecasting currency trends. Taking into account these expected trends, the Investment Manager may increase the Fund’s currency exposure. In doing so, it places particular focus on managing the Fund’s exposure to those currencies less likely to hold their long-term value.

The Investment Manager may cause the Fund to be under or over the asset allocation weightings described above where it considers this to be in the best interest of the Fund. The Fund’s holdings may deviate meaningfully from the 60/40 Index.

Orbis Investment Management (Luxembourg) S.A.

Fact Sheet at 31 August 2020
Fees, Expenses and Total Expense Ratio (TER)

The relevant class within the Fund bears all expenses payable by such class, which shall include but not be limited to fees payable to its Manager, Investment Manager and additional services providers, fees and expenses involved in registering and maintaining governmental registrations, taxes, duties and all other operating expenses, including the cost of buying and selling assets. However, the Manager and the Investment Manager have agreed that in the current calendar year, except for specified exclusions, operating expenses attributable to the Fund’s Shared Investor RRF Class (A) will be capped at 0.20%. Please refer to the Fund’s Prospectus for a description of the fee cap applicable to its other share classes. Each cap will be automatically extended for further successive one year periods unless terminated by the Manager or the Investment Manager at least three months prior to the end of the then current term. The operating expenses that are capped are all expenses, excluding the Manager’s and Investment Managers’ fees described above under “Management Fee,” the cost of buying and selling assets, interest and brokerage charges.

Where an investor subscribes or redeems an amount representing 5% or more of the net asset value of the Fund, the Manager may cause the Fund to levy a fee of 0.40% of the net asset value of the Fund’s shares being acquired or redeemed.

The annual management fees charged are included in the TER. The TER is a measure of the actual expenses incurred by the class over a 12 month period, excluding trading costs. Since Fund and Class returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns. Expenses may vary, so the current TER is not a reliable indicator of future TERs.

Risk/Reward Profile

• The Investment Manager aims to contain the risk of monetary loss to a level that is below the risk of loss experienced by global equity funds but higher than that experienced by government bond funds and cash deposits over the long term. Investors should be aware that this expected reduction in risk of loss comes at the expense of long-term expected return.

• While the Investment Manager expects the Fund’s investment approach to result in volatility below that of a typical global equity fund, the Fund’s net asset value will fluctuate, and the Fund will experience periods of volatility and negative returns; investments in the Fund may suffer capital loss.

• Investors should understand that the Investment Manager generally assesses an investment’s attractiveness over a three-to-five year time horizon.

• for the Shared Investor RRF Share Class(es), Standard Share Class(es), and Investor Share Class(es), from the Orbis website at www.orbis.com.

Legal Notices

Returns are net of fees, include income and assume reinvestment of dividends. Figures quoted are for the periods indicated for a $10,000 investment (sum for, if illustrative purposes only). Annualised returns show the average amount earned on an investment in the Fund/share class each year over the given time period. This Report does not constitute advice nor a recommendation to buy, sell or hold, nor an offer to sell or a solicitation to buy interests or shares in the Orbis Funds or other securities in the companies mentioned in it.

Collective Investment Schemes (CIS) are generally medium to long-term investments. The value of an investment in the Fund may go down as well as up, and past performance is not a reliable indicator of future results. Neither the Manager nor the Investment Manager provides any guarantee with respect to capital or the Fund’s returns. CIS are traded at ruling prices and can engage in borrowing and scrip lending. Commission and incentives may be paid by investors to third parties and, if so, would be included in the overall costs. Individual investors’ performance may differ as a result of investment date, reinvestment date and dividend withholding tax, as well as a levy that may apply in the case of transactions representing more than 5% of the Fund’s net asset value. The Fund may be closed to new investments at any time in order to be managed in accordance with its mandate. The Fund invests in foreign securities. Depending on their markets, trading in those securities may carry risks relating to, among others, macroeconomic and political circumstances, constraints on liquidity or the repatriation of funds, foreign exchange rate fluctuations, taxation and trade settlement.

The discussion topics for the commentaries were selected, and the commentaries were finalised and approved, by Orbis Investment Management Limited, the Fund’s Investment Manager. Information in this Report is based on sources believed to be accurate and reliable and provided “as is” and without any warranty or warranty as to the accuracy, reliability, timeliness or completeness of the information in this Report. The Orbis Group disclaims all liability (whether arising in contract, tort, negligence or otherwise) for any error, omission, loss or damage (whether direct, indirect, consequential or otherwise) in connection with the information in this Report.

Fund Information

The benchmark is a composite index consisting of the MSCI World Index with net dividends reinvested (60%) and the JP Morgan Global Government Bond Index (40%).

Net Equity is Gross Equity minus stockmarket hedging. Fixed Income refers to fixed income instruments issued by corporate bodies, governments and other entities, such as bonds, money market instruments and cash and cash equivalents. Fixed income regional allocation is based on the currency denomination of the instrument. Net Fixed Income is Gross Fixed Income minus bond market hedging.

Fund Minimum

Minimum investment amounts in the Fund are specified in the Fund’s Prospectus, provided that a new investor in the Orbis Funds must open an investment account with Orbis, which may be subject to minimum investment restrictions, country restrictions and/or other terms and conditions. For more information on opening an Orbis investment account, please visit www.orbis.com.

Clients investing via Allan Gray, which includes the Allan Gray Investment Platform, an Allan Gray investment pool or otherwise through Allan Gray Nominees, remain subject to the investment minimums specified by the applicable terms and conditions.

Sources

The 60/40 Index values are calculated by Orbis using end of day index level values licensed from MSCI (“MSCI Data”). For the avoidance of doubt, MSCI is not the benchmark “administrator” for, or a “contributor”, “submitter” or “supervised contributor” to, the blended returns, and the MSCI Data is not considered a “contribution” or “submission” in relation to the blended returns, as those terms may be defined in any rules, regulations or legislation or international standards. MSCI Data is provided “as is” without warranty or liability and no copying or distribution is permitted. MSCI does not make any representation regarding the advisability of any investment or strategy and does not sponsor, promote, issue, sell or otherwise recommend or endorse any investment or strategy, including any financial products or strategies based on, tracking or otherwise utilising any MSCI Data, models, analytics or other materials or information. The latest average fund indices provided by Morningstar are for 20 August 2020. To allow comparison of returns to a common date we have extended the average equity and multi-asset class fund indices to reflect the subsequent movement of the applicable benchmark indices. Average fund returns are not shown for periods of a month or less as high price volatility and late fund reporting regularly cause them to be significantly restated by Morningstar.
Notes to Help You Understand This Report

Certain capitalised terms are defined in the Glossary section of the Orbis Funds’ respective Prospectuses, copies of which are available upon request from Allan Gray Unit Trust Management (RF) Proprietary Limited, a Member of the Association for Savings & Investments SA. The country, currency and Emerging Market classification for securities follows that of third-party providers for comparability purposes. Emerging Markets includes Frontier Markets. Based on a number of factors including the location of the underlying business, Orbis may consider a security’s classification to be different and manage the Funds’ exposures accordingly. Totals presented in this Report may not sum due to rounding.

Risk measures are ex-post and calculated on a monthly return series. Months to recovery measures the number of months from the preceding peak in performance to recovery of that level of performance.

12 month portfolio turnover for the Orbis Equity and Multi-Asset Class Funds is calculated as the lesser of total security purchases or sales in the Fund over the period, divided by the average net asset value (NAV) of the Fund. Short-term fixed income instruments are not included.

12 month name turnover for the Orbis Equity and Multi-Asset Class Funds is calculated as the number of positions held by the Fund at the start of the period but no longer held at the end of the period, divided by the total number of positions held by the Fund at the start of the period. Short-term fixed income instruments are not included.

Active share is a measure of the extent to which the holdings of the Orbis Equity and Multi-Asset Class Funds differ from their respective benchmark’s holdings. It is calculated by summing the absolute value of the differences of the weight of each individual security in the specific Orbis Fund, versus the weight of each holding in the respective benchmark index, and dividing by two. For the Multi-Asset Class Funds, three calculations of active share are disclosed. The Portfolio active share incorporates the equity, fixed income, commodity-linked and other securities (as applicable) held by the Orbis Fund and compares those to the holdings of the composite benchmark. The Equity and Fixed Income active shares are calculated as if the equity and fixed income portions of the Orbis Funds are independent funds; each of those two sets of holdings is separately compared to the fully-weighted holdings in the appropriate component of the composite benchmark. Although the Multi-Asset Class Funds hedge stock and bond market exposure, the active share calculations are “gross” and not adjusted to reflect the hedging in place at any point in time.

The total expense ratio has been calculated using the expenses, excluding trading costs, for the 12 month period ending 31 August 2020.
