

## Our Thinking

Wall Street folklore is full of tales about investors going to great lengths to get an “edge”. These range from Nathan Rothschild’s alleged use of carrier pigeons to learn about Napoleon’s defeat at Waterloo in 1815, to stories about New York hedge fund managers hiring couriers to fetch the *Financial Times* from JFK airport before it hit the newsstands. It can be hard to separate fact from fiction in these accounts, but there’s no question that it used to be a lot easier to gain an informational edge.

We’ve seen this in our own evolution as a firm. Back in the early 1990s, it was not uncommon for analysts to rely on pencils, paper and financial calculators. It was a painful process, and with increasingly powerful computers available, we saw easy opportunities for pain relief. So we created proprietary screening tools and quantitative valuation models that reflected the thought process of our founder, Allan Gray.

Over the years, maintaining an edge has become ever more challenging, and our techniques and tools have continued to evolve. Our latest effort is the formation of our Investment Insights team. The team’s eight members include data analysts, data scientists, and data engineers, and their role is to help our stockpickers address hard-to-answer questions in an investment thesis. To do this, the team leverages alternative datasets and advanced analytics, including machine learning techniques.

We do not, however, let the machines run wild to find every statistical relationship under the sun. Instead, our team works in response to specific questions from the analyst researching the company. Our analysts use their independent judgement to form hypotheses, and where relevant, our Investment Insights team can help to validate—or just as usefully, invalidate—them.

Our research on Comcast, a cable communications and broadband giant in the US, is a good example of how this works in practice.

In analysing the company, two questions lent themselves to in-depth primary research. First, can Comcast continue to attract new broadband customers? And second, are Comcast’s plans competitive in terms of speed and pricing? Both can be answered with traditional research methods—speaking to the company and its competitors, forecasting based on historical growth rates, etc.—but those approaches come with biases and other shortcomings. The Investment Insights team was well-placed to help with a more rigorous solution.

To answer the first question, they sourced, cleaned and analysed over 20 million rows of publicly available

data reported by internet service providers (ISPs) to the Federal Communications Commission (FCC). The data in hand, they studied the coverage and product offerings of Comcast and its competitors right down to the smallest geographical unit for which the United States Census Bureau publishes data. What we found is that in about 60% of the areas where Comcast offers broadband, the only competitors were slower DSL offerings. This gave us confidence that Comcast could take market share as consumers seek out faster internet speeds.

To answer the second question, we analysed ISPs’ plan speed and pricing data from another publicly available source and found that Comcast is competitively priced against peers given its superior high speed offering. Answers to both of these questions were instrumental in our analyst’s decision to recommend the stock.

Comcast is just one example of the team’s work. The team has also mapped drugstores in Japan, analysed grocery stores in Russia, monitored foot traffic in casinos, analysed patent data and filing activities, and measured wind speed in the US in the context of local land use and topography. While others in our industry might use alternative data and machine learning to forecast sales next month or earnings next quarter, we use these techniques to understand a business’ prospects and the impact on its intrinsic value over *years*.

In addition to their work on individual companies, the Investment Insights team also develops capabilities that our analysts can use for a wider range of objectives. For instance, Natural Language Processing capabilities can be applied to a variety of unstructured texts to generate insights, and we’ve used this technique to analyse everything from SEC filings to online employee and consumer reviews.

Not all investments require this type of expertise to help our analysts to build conviction in a thesis. But the Investment Insights team provides powerful tools for our analysts to use when they *do* need them, and when it matters, it can make all the difference. Their input can help us build the conviction needed to suppress emotion and lean into a contrarian opportunity.

Over time, we expect that technology and the team will continue to evolve. So will our competitors. What won’t change is our focus on understanding the intrinsic value of companies and, in doing so, making the most of both human insights and the latest quantitative tools to develop an edge.

---

# Orbis SICAV Japan Equity (Yen) Fund

## Shared Investor Refundable Reserve Fee Share Class (A) ("Shared Investor RRF Class (A)")

The Fund is designed to be exposed to all of the risks and rewards of selected Japanese equities and seeks higher returns than the Japanese stockmarket, without greater risk of loss. This Share Class is predominantly exposed to the Japanese yen. Its performance fee benchmark ("Benchmark") is the Tokyo Stock Price Index, including income, net of withholding taxes ("TOPIX (net)").

### Growth of ¥10,000 investment, net of fees, dividends reinvested

The Shared Investor RRF Class (A) inceptioned on 14 May 2020 (date indicated by dashed line above). Information for the period before the inception of the Shared Investor RRF Class (A) relates to the Investor Share Class and its relevant benchmark, the Tokyo Stock Price Index, including income, gross of withholding taxes ("TOPIX (gross)").

<b>Investment Manager</b>	Orbis Investment Management Limited
<b>Fund Inception date</b>	1 January 1998
<b>Class Inception date (Shared Investor RRF Class (A))</b>	14 May 2020
<b>Number of shares (Shared Investor RRF Class (A))</b>	175,008
<b>Income distributions during the last 12 months</b>	None

### Fund Objective and Benchmark

The Yen Classes of the Fund seek higher returns in yen than the Japanese stockmarket, without greater risk of loss. A benchmark is used by the Fund for two purposes: performance comparison (the “Fund Benchmark”) and performance fee calculation (the “Performance Fee Benchmark”). The Fund Benchmark is the Tokyo Stock Price Index, including income, gross of withholding taxes (“TOPIX (gross)”). The Performance Fee Benchmark of the Shared Investor RRF Class (A) is the Tokyo Stock Price Index, including income, net of withholding taxes (TOPIX (net)).

The Fund does not seek to mirror the TOPIX (gross)/(net) and may deviate meaningfully from them in pursuit of superior long-term capital appreciation.

### How We Aim to Achieve the Fund’s Objective/Adherence to Objective

The Fund is actively managed and is designed to be exposed to all the risks and rewards of selected Japanese equities. The Fund identifies as Japanese equities those equities of companies which are domiciled in Japan, whose securities trade on a Japanese stockmarket or whose business is primarily located in or linked to Japan. These equities are selected using extensive proprietary investment research undertaken by the Investment Manager and its investment advisors. Orbis devotes a substantial proportion of its business efforts to detailed “bottom up” investment research conducted with a long-term perspective, believing that such research makes superior long-term performance attainable. The lower the price of a share as compared to its assessed intrinsic value, the more attractive Orbis considers the equity’s fundamental value. The Investment Manager believes that over the long term, equity investing based on this approach offers superior returns and reduces the risk of loss. In addition, the Fund may, to the extent permitted by its investment restrictions, also periodically hold cash and cash equivalents when the Investment Manager believes this to be consistent with the Fund’s investment objective.

All share classes invest in a portfolio of Japanese equities selected by the Investment Manager. The currency exposure of the Shared Investor RRF Class (A) remains as fully exposed to the yen as practicable.

The net returns of the Shared Investor RRF Class (A) from its inception on 14 May 2020, stitched with the net returns of the Investor Share Class from the Fund’s inception to 14 May 2020, have outperformed the stitched Performance Fee Benchmarks of the respective classes. The Fund will experience periods of underperformance in pursuit of its long-term objective.

### Risk/Reward Profile

- The Fund is aimed at investors who are seeking a portfolio the objective of which is to invest in, and be exposed to, Japanese equities.
- Investments in the Fund may suffer capital loss.
- Investors should understand that the Investment Manager generally assesses an equity investment’s attractiveness using a three-to-five year time horizon.

### Management Fee

As is described in more detail in the Fund’s Prospectus, the Fund’s various share classes bear different management fees. The fees are designed to align the Manager’s and Investment Manager’s interests with those of investors in the Fund.

The Shared Investor RRF Class (A)’s management fee is charged as follows:

- **Base Fee:** Calculated and accrued weekly at a rate of 0.8% per annum of the Class’ net asset value. Investors separately pay an administrative fee directly to Allan Gray Proprietary Limited or one of its affiliates. The Investment Manager or one of its affiliates is entitled to receive a separate fee from Allan Gray Proprietary Limited or one of its affiliates in connection with this administrative fee, related to services the Investment Manager and its affiliates provide to Allan Gray Proprietary Limited or its affiliates.
- **Refundable Performance Fee:** When the performance of the Shared Investor RRF Class (A) (after deducting the Base Fee and an additional 0.3% per annum, which is deemed to be representative of the aforementioned administrative fee) beats the Performance Fee Benchmark over the period from one dealing day to the next, 25% of the value of the outperformance is paid into a reserve and reinvested into the Fund. If the value of the reserve is positive on any dealing day, the Investment Manager is entitled to a performance fee in an amount capped at the lesser of an annualised rate of (a) one-third of the reserve’s net asset value and (b) 2.5% of the net asset value of the Shared Investor RRF Class (A). Fees paid from the reserve to the Investment Manager are not available to be refunded as described below.

When the performance of the Shared Investor RRF Class (A) (after deducting the Base Fee and the aforementioned additional 0.3% per annum) trails the Performance Fee Benchmark over the period from one dealing day to the next, 25% of the value of the underperformance is refunded from the reserve to the Shared Investor RRF Class (A). If at any time sufficient value does not exist in the reserve to provide the refund, a reserve recovery mark is set, and subsequent underperformance is tracked. Such related losses must be recovered before any outperformance results in any payment to the reserve.

Please review the Fund’s prospectus for additional detail and for a description of the management fee borne by the Fund’s other share classes.

## Orbis SICAV Japan Equity (Yen) Fund

### Shared Investor Refundable Reserve Fee Share Class (A) (“Shared Investor RRF Class (A)”)

#### Fees, Expenses and Total Expense Ratio (TER)

The relevant class within the Fund bears all expenses payable by such class, which shall include but not be limited to fees payable to its Manager, Investment Manager and additional service providers, fees and expenses involved in registering and maintaining governmental registrations, taxes, duties and all other operating expenses, including the cost of buying and selling assets. However, the Manager and the Investment Manager have agreed that in the current calendar year, except for specified exclusions, operating expenses attributable to the Fund’s Shared Investor RRF Class (A) will be capped at 0.20%. Please refer to the Fund’s Prospectus for a description of the fee cap applicable to its other share classes. Each cap will be automatically extended for further successive one year periods unless terminated by the Manager or the Investment Manager at least three months prior to the end of the then current term. The operating expenses that are capped are all expenses, excluding the Manager’s and Investment Managers’ fees described above under “Management Fee,” the cost of buying and selling assets, interest and brokerage charges, and certain taxes.

Where an investor subscribes or redeems an amount representing 5% or more of the net asset value of the Fund, the Manager may cause the Fund to levy a fee of 0.25% of the net asset value of the Fund shares being acquired or redeemed.

The annual management fees charged are included in the TER. The TER is a measure of the actual expenses incurred by the class over a 12 month period, excluding trading costs. Since Fund and Class returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns. Expenses may vary, so the current TER is not a reliable indicator of future TERs.

#### Changes in the Fund’s Top 10 Holdings

- for the Shared Investor RRF Share Class(es), Standard Share Class(es), and Investor Share Class(es), from the Orbis website at [www.orbis.com](http://www.orbis.com).

## Legal Notices

Returns are net of fees, include income and assume reinvestment of dividends. Figures quoted are for the periods indicated for a ¥10,000 or €10,000 investment (lump sum, for illustrative purposes only). Annualised returns show the average amount earned on an investment in the Fund/share class each year over the given time period. This Report does not constitute advice nor a recommendation to buy, sell or hold, nor an offer to sell or a solicitation to buy interests or shares in the Orbis Funds or other securities in the companies mentioned in it.

Collective Investment Schemes (CIS) are generally medium to long-term investments. The value of an investment in the Fund may go down as well as up, and past performance is not a reliable indicator of future results. Neither the Manager nor the Investment Manager provides any guarantee with respect to capital or the Fund's returns. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. CIS are traded at ruling prices and can engage in borrowing and scrip lending. Commission and incentives may be paid by investors to third parties and, if so, would be included in the overall costs. Individual investors' performance may differ as a result of investment date, reinvestment date and dividend withholding tax, as well as a levy that may apply in the case transactions representing more than 5% of the Fund's net asset value. The Fund may be closed to new investments at any time in order to be managed in accordance with its mandate. The Fund invests in foreign securities. Depending on their markets, trading in those securities may carry risks relating to, among others, macroeconomic and political circumstances, constraints on liquidity or the repatriation of funds, foreign exchange rate fluctuations, taxation and trade settlement.

The discussion topics for the commentaries were selected, and the commentaries were finalised and approved, by Orbis Investment Management Limited, the Fund's Investment Manager. Information in this Report is based on sources believed to be accurate and reliable and provided "as is" and in good faith. The Orbis Group does not make any representation or warranty as to accuracy, reliability, timeliness or completeness of the information in this Report. The Orbis Group disclaims all liability (whether arising in contract, tort, negligence or otherwise) for any error, omission, loss or damage (whether direct, indirect, consequential or otherwise) in connection with the information in this Report.

## Fund Information

Prior to 29 November 2002 the Orbis SICAV Japan Equity Fund—Yen class was a British Virgin Islands investment company, Orbis Japan Equity (Yen) Fund Limited.

## Fund Minimum

Minimum investment amounts in the Fund are specified in the Fund's Prospectus, provided that a new investor in the Orbis Funds must open an investment account with Orbis, which may be subject to minimum investment restrictions, country restrictions and/or other terms and conditions. For more information on opening an Orbis investment account, please visit [www.orbis.com](http://www.orbis.com).

Clients investing via Allan Gray, which includes the Allan Gray Investment Platform, an Allan Gray investment pool or otherwise through Allan Gray Nominees, remain subject to the investment minimums specified by the applicable terms and conditions.

## Sources

Tokyo Stock Price Index, including income ("TOPIX"): Tokyo Stock Exchange. TOPIX hedged into euro is calculated by Orbis using an industry-standard methodology using the TOPIX which is in yen. No further distribution of the TOPIX data is permitted.

Average Fund data source and peer group ranking data source: © 2021 Morningstar. All Rights Reserved. Such information (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. The latest average fund indices provided by Morningstar are for 22 April 2021. To allow comparison of returns to a common date we have extended the average equity and multi-asset class fund indices to reflect the subsequent movement of the applicable benchmark indices. Average fund returns are not shown for periods of a month or less as high price volatility and late fund reporting regularly cause them to be significantly restated by Morningstar.

### Notes to Help You Understand This Report

Certain capitalised terms are defined in the Glossary section of the Orbis Funds' respective Prospectuses, copies of which are available upon request from Allan Gray Unit Trust Management (RF) Proprietary Limited, a Member of the Association for Savings & Investments SA. The country and currency classification for securities follows that of third-party providers for comparability purposes. Emerging Markets follows MSCI classification when available and includes Frontier Markets. Emerging Markets currency exposure is based on currency denomination. Based on a number of factors including the location of the underlying business, Orbis may consider a security's classification to be different and manage the Funds' exposures accordingly. Totals presented in this Report may not sum due to rounding.

Risk measures are ex-post and calculated on a monthly return series. Months to recovery measures the number of months from the preceding peak in performance to recovery of that level of performance.

12 month portfolio turnover for the Orbis Equity and Multi-Asset Class Funds is calculated as the lesser of total security purchases or sales in the Fund over the period, divided by the average net asset value (NAV) of the Fund. Cash and cash equivalents are not included.

12 month name turnover for the Orbis Equity and Multi-Asset Class Funds is calculated as the number of positions held by the Fund at the start of the period but no longer held at the end of the period, divided by the total number of positions held by the Fund at the start of the period. Cash and cash equivalents are not included.

Active share is a measure of the extent to which the holdings of the Orbis Equity and Multi-Asset Class Funds differ from their respective benchmark's holdings. It is calculated by summing the absolute value of the differences of the weight of each individual security in the specific Orbis Fund, versus the weight of each holding in the respective benchmark index, and dividing by two. For the Multi-Asset Class Funds, three calculations of active share are disclosed. The Portfolio active share incorporates the equity, fixed income, commodity-linked and other securities (as applicable) held by the Orbis Fund and compares those to the holdings of the composite benchmark. The Equity and Fixed Income active shares are calculated as if the equity and fixed income portions of the Orbis Funds are independent funds; each of those two sets of holdings is separately compared to the fully-weighted holdings in the appropriate component of the composite benchmark. Although the Multi-Asset Class Funds hedge stock and bond market exposure, the active share calculations are "gross" and not adjusted to reflect the hedging in place at any point in time.

The total expense ratio has been calculated using the expenses, excluding trading costs, for the 12 month period ending 30 April 2021.
